ConformityGate: supervised learning and frozen transfer
a
UK learning under outer group isolation
Training fold only: every learned stage excludes held-out groups
Sensor blocks
Sensor-only daily inputs
30-day completed products
Candidate generation
Six calibration pipelines
Shared prior audit, B = 0/1/3/7
Feature representation
I: identity; E: context
P: output summaries; audit
HGB classifier
Composite-label supervision
Held-out UK scores
Calibration references
UK source fitting days
Excluded target site/device
Conformity labels
UK assessment references
Supervision, never predictors
b
Frozen evaluation and review in India and the U.S.
Identical feature schema; imputation, scaling and classifier fitted in the UK
Target sensor blocks
Same daily interface
Permitted prior audits
Source-fitted features
UK imputation and scaling
I/E/P and audit features
Frozen UK classifier
No target-label tuning
One score per candidate
Review prioritization
Rank candidate products
Then verify with references
Target assessment references
At least 23 paired days; hidden during scoring
Evaluation and verification
AUROC; review precision; matched yield
Document reference-backed final products
